Something About

there are no impossible tasks, there are tasks that takes some time to handle.
there are no need in technology if you can't use it.
if you need to eliminate bribe, gift them something they cannot support (dump truck or internet).
small steps is everything you need to reach any spot in any place.
don't start with final, start with something and you won't be stuck.
perfection is good target, but unreachable goal.
don't worry be happy.

Work Experience (Please Notice same company without something in between is just split into some logical parts.)

Jul 2025–Oct 2025

(3 months)

Senior Full Stack developer

Sapiens

Technical Skills: Reactive Java 21, git, JUnit, Spring Boot, AWS, Docker, Gradle, TypeScript, React, Oracle, MS SQL, PostgreSQL, Playwright

Project: Grid based admin page with 3 Grids in total, Agile (Maybe), Corporative Domain

Team Size: 3 BE, 1 FE, 1 QA, 1 TL

Tasks Thematic: Business requirements, DB migrations, Bug fixes, Internal // External support

Work on

- Database a > database b migration
- with data adjustment
- Bugs
- FE data // output adjustments
- tests
- pipeline stability fixes
- Lambdas

Adjustments to Corporative domain env (all BE was on linux so there was problems)

People are best that I have ever met, but I never seen worse process organization.

Jun 2025 – Jul 2025

~1 months

Dev OPS

C.T.Co (Internal project)

Technical Skills: GO Lang, Java, Confluence, CI/CD, Azure DevOps, Kubernetes

Project: tons of pipelines auto build of project creating vendor artifacts, complex deployment schemas adjustments, app resources support, Agile (Maybe), Corporative Domain

Team Size: approx 8 DevOps engineers, 1 PM. External guys

Tasks Thematic: Fixing Bugs in Go Lang, Removing GO from pipelines (replace by Ansible), support of pipelines stability

Work on:

- Packagist Zip files missing create time (Go Didn't set up correctly)
- Something got wrong
- deployment fails (Some dependency update broke project)
- Fixing Go maven dependency auto update
- We need to create shared drive for all projects (worked 1 day not finished)
- Created script for Gathering all Users who are coding in our Repositories

Aug 2024 – May 2025 Insurance, Lead Backend Developer (Full Stack)
C.T.Co (external project)

~9 month

Technical Skills: Cucumber, Java 11, JUnit, Mockito, ORM/DAO, Oracle, Docker, Kubernetes, Maven, Bitbucket, Jenkins, CI/CD, Vaadin, MQ, PAIN, PACS, VTK, Generators

Project: Huge Monolith with complex setup and admin (40+ complex grids). Working on features, fixing bugs. Waterfall (C.T.CO colleagues was fighting for Agile.)

❤❤Team Size: 4 devs, 3 QA, 1 PM, 1 Architect, 2 BA❤❤

Passed HireRight background check. https://www.hireright.com/

Tasks Thematic: Study Banking, Investigations, Seek and solve, almost 0 information bubble

Worked On

- Tons of listening about Banking
- Fixing bugs
- Finished Feature
- Gathered Feature requirements
- fixing creating tests
- helping collegues (QA, BA) to live in hell environment
- Pipelines confirmation hell

Environment: Project build time 30 minutes up to 2 days (depends on crush amount due to low memory), Monolith with tons of Code, pipelines with about 50 max errors (all the time you should validate your errors to master). tons of production code bases (20+) due to large client amount.

Aug 2023 – Aug 2024 Insurance (L&H) Lead Backend Developer (Full Stack)

C.T.Co (internal project)

12 month

Technical Skills: Cucumber, Java (11, 17), JUnit, Orika, Mapstruct, LTPA, OAuth, Mockito, Hibernate, PostgreSQL, Oracle, Spring Boot, Angular, Azure DevOps, Maven, Confluence, WLP, CI/CD, Azure Cloud, Cloudflare, ADR, Deployment models, Ansible, Docker, JWT

Project: 4 small projects, Business Work According to specification, Agile (maybe), Corporative Domain

Team Size: 4 devs, 3 QA, 1 PM, 1 Architect (partial)

Tasks Thematic: Disaster recovery, bug fix, Sonar reports fix, pipeline fixes, migration related issues, db recovery tasks

Worked On:

- rework complex authorization (had 3 different auth providers) LTPA >> OAuth
- Disaster recovery steps create and documentate
- Tons of features
- Tons of bugs
- Some pipeline fixes
- Fixing deployment (due to organization devops cool steps) all deployment to (Dev, UTA, Prod)
- Failed (needed detect reason recover fix)
- Developers support with what we can do
- Almost all tasks without documented or specs was falling into my hands
- Database adjustments.

Mar 2022 – Aug 2023 Insurance (P&C) Backend Developer (Full Stack)

C.T.Co (internal project) ❤❤

18 month

Technical Skills: Java (11, 17), JUnit, Mockito, Hibernate, PostgreSQL, Oracle, Spring Boot (2, 3), Angular, Azure DevOps, Maven, WLP, CI/CD, Azure Cloud, Deployment models, Ansible, Confluence, Terraform, Helm, Kubernetes, Docker

Project: 1 huge project 4 small projects, Agile (almost), Corporative Domain

Team Size: ~20 persons, 1 PM, 1 DB Arch, 3-4 devs in close contact, 2 QA in close contact

Tasks Thematic: 2 projects production // dev support, Migration help, Bug fixes, Business support

Worked On:

- Solo (+QA, +DevOps that works with Azure only
- and support with words like You will make it.) working for support of 2 small projects
- Complex large excel file calculations according to business rules (tons of adjustments workflow changes optimizations)
- Deployment migration help (update docker // kubernetes // helm) help with migrations (Bitbucket >> Azure DevOps reps)
- deployment schemas adjustments to organization needs, Involved in tech discussions
- We have project no one knows how it work, we need to fix this bug (some bugs)
- migration Hibernate (javax >> jakarta)
- Spring Boot Upgrade 2 >> 3
- Java upgrade 11 >> 17
- Azure Cloud deployment fixes
- Security adjustments

represented company in DevClub with lecture about how to think to start SOLID in real projects.

Dec 2020 – Mar 2022

~13 months

IGaming, Senior Full Stack developer

ITLABS 22 (AGC Soft) ❤❤❤

Technical Skills: PHP, Symfony (refactoring from Phalcon), RabbitMQ, Redis, MySQL, React, Docker, GitLab (incl. CI/CD pipelines), Graylog, Sentry, PHPUnit, Codeception, Xdebug, Jira, Confluence, Composer, Scrum/Agile

Project: CMS (Strong HTML + css + javascript, TS on React) customization settings

❤❤❤Team Size: 2 BE, 1 QA, 1 PM, Partial (CTO)❤❤❤

Tasks Thematic: Support Translations, Support FE with all backend needs for clients, Support SEO, support mobile developers.

Work on:

- We have something on Phalcon refactor it to Symfony (was making roadmap, success finish)
- full production support (hotfixes, stability responsibility
- adjustments deployment things ...
- optimizing creating pipelines)
- full team support
- designed implemented full translation support service (iin) (functionality, + import//export + adjusted FE and all BE) for BE and FE
- (Was offered to become TL kind a rejected due to small team and plans to change language to JAVA)
- Creating Functional Tests (engine based on 2 Framework setup.)
- Optimizations was made by me
- (no prod downs durring this time period, there was 1 hour, but it was as some one forgot to pay about servers.)
- creating roadmaps for each requested implementation.

maybe not December

Sep 2020 – Dec 2020

~4 months

IGaming, Senior Full Stack developer

ITLABS 22 ❤❤❤

Technical Skills: PHP 8.4, Phalcon, Redis, MySQL, React, Docker, GitLab (incl. CI/CD pipelines), PHPUnit, Codeception, Xdebug, Jira, Confluence, Composer, Scrum/Agile

Project: BackOffice

❤❤❤Team Size: 5 or 6 devs, 1 TL, 3 or 4 QA.❤❤❤

Tasks Thematic: we have backoffice (admin for controlling external vendors, Credit Debit summary)

Work on:

- fixing tons of bugs
- optimization Credit // Debit calculations
- implementing features
- finalize implementation of permission control system(TL gone to vacation)
- fixing critical flow bugs (QA told that I am good as after almost all my tasks they close more than one bugs not related to my task.)

maybe not December

Aug 2020 – Feb 2021

(6 months)

IT Specialist Mentod (Part time approx 10 payed hours per month)
SDAC Academy

Technical Skills: Good Practices such as SOLID, YAGNI, Clean Code, DDD, Java, Git, Slack, Software Development Patterns (Gang of Four)

Project: Mentoring clients

❤Me + 20 students (each month new) + 1 HR, + Slack with tons of mentors.❤

Tasks Thematic: Make 2 Lecture (4 hours each) + Homework support + answer on questions

Work on:

- Prepare materials
- Make Lecture strategy
- Support questions from clients(students)
- Raise interest in development
- Check homework results.

Oct 2018 – Apr 2020

(18 months)

Senior Full Stack developer (SMS, Mail, Stability, Price Gathering and other services)

Sia Dynatech ❤❤

Technical Skills: Codeception, Datalake, Composer, GeoDump, Redis, Memcached, PHP 8.4, MySQL (MariaDB), JQuery, JS, VueJs, Angular, Git, Gitlab, Sentry, GrayLog, Symfony, Laravel, Custom Framework, JWT, Linux, Code Generators, MicroServices, Docker, CI/CD, partial PROD support

Project: Created 2 new Projects, about 5 existing projects support. Just Do the job setup

Team Size: 5 Full Stack, 1 Tech Lead, 1 Team Lead, 1 PM, ?? QA maybe 0 don't remember

Tasks Thematic: Everything related to business (Mailing, SMS, Failure Monitoring, Geo Data, Api, Price Gathering)

Work on:

- Created service that will detect closes Hotels // Cities // Car rental agencies to Airport
- Created API client that will work inside company almost any projects with required setup (all projects should have only 1 auth setup to this service)
- created support for multiple tasks whenever something gone wrong
- improved test coverage in all projects
- Implemented some functionality in custom framework (cache reset, some bug fixes)
- Made 2 internal lectures about tests
- Participate in 2 challanges
- Junior // Mid support with technical knowledge (including persons from other teams, even other project TLs was asking me for some help, even Tech Lead was consultation with me, also my Team Lead was not ignoring my toughts)
- Integrated Symfony in some projects (replaced from raw almost framework solution)

Dec 2016–Oct 2018

(22 months)

Team Lead (SMS, Mail, Stability, Price Gathering and other services)
Sia Dynatech (Dyninno) ❤❤

Technical Skills: Codeception, Composer, Memcached, PHP 6, PHP 8.x, MySQL (MariaDB), JQuery, JS, Angular, Git, Gitlab, Symfony, Custom Framework, Linux, Docker, CI/CD, full PROD support (custom tools)

Project: Team Services (6 large projects and about 26 small ones)

Team Size: 5+ Full Stack, 1 QA, 1 PM (appered later), 1 TL

Tasks Thematic: To much to explain just keep everything running.

Work on:

- almost 0 long term production problems (was 1 made by collegue when I gone in to vacation)
- was 1 due to database sharing with other team
- 1 was due to external service
- Solved tons of Bugs
- switched tons of tech stacks (Custom loggers, external APIS, hostings ...)
- fixed tons of bugs
- optimized tons of things
- helped to create of 3+ (can't remember what was new) new services
- mentoring, supporting everyone
- upgraded PHP versions
- switched tons of FE frameworks and libs like bootstrap // jqgrid and so on
- Restructured increased team overall level
- Made local legend out of me
- Guided DB Migration
- Started Symfony integration.

long term (more than 10 minutes.)

Not sure about tech stack tehre was more everything but I can not remember right now everything it's so many time passed.

May 2016–Dec 2016 Senior Full Stack developer

(7 months) Sia Dyninno ❤❤

Technical Skills: Codeception, Memcached, PHP 6, MySQL (MariaDB), JQuery, JS, Git, Gitlab, Linux, CI/CD, partial PROD support

Project: Team Services

Team Size: Team Size: up to 8 Full Stack, 1 QA, 1 TL

Tasks Thematic: Do whatever task comes

Work on:

- restructured mail system (optimized about 20+ times)
- restructured Status Monitor (optimized and make more stable)
- optimized Rasbery PI on monitors to work more stable
- tons of bugs, tons of refactoring
- tons of optimizations
- optimized Price Service workflow. ...
- reacted to one production incident and returned Mail service back online (some one forgot to pay for hard drives, and I fixed it in 2 hours by reworking Mail system to get all required data from db history tables instead of HDD. HDD returned back online in 2 days, so it gave business to almost fully functional for this time period.)

Jul 2025–Oct 2025

(1 month)

Software Developer (Stock Exchange company)
Sia Stock Guru

Technical Skills: Excel, Java, Thomson Reuters, Bloomberg

Project: No Project Startup

Team Size: 1 Developer

Tasks Thematic: Prepare something to reduce Thomson Reuters costs during Excel report generation, create API to reduce necessary Bloomberg subscriptions.

Work on:

- Reworked all Api Requests from excel files from Thomson Reuters to Bloomberg.
- implemented basic API that can gather information from bloomberg and send somewhere
- Studied Bloomberg Api documentation and app itself.

Small progress was due to limited time scope to access Bloomberg (2 hours per day) as explained the subscription is to expensive to give it for some random dev. about 40 000$ per year for single PC.

Jun 2014 – Dec 2016 Software Developer

(30 months) Sia Dyninno ❤❤

Technical Skills: JavaScript, JQuery, PHP6, HTML, CSS, Android, xss, ...From Services

Project: Frontend Web application we display to clients on 5 websites, ened up in Services.

Team Size: Flexible huge amount of devs and 1 QA

Tasks Thematic: Make multi-website engine stable and improvements, create new projects, refactor simplify.

Work on

- Tons of FE bugs (One guy asked why we are needed if we can just give task to Maris and he will do it faster.)
- Found random bug (pure magic on random moments and pages, ended up finding (JS compilation hash intersection, fixed.))
- We have 5 sites 4 sites is using this framework, 1 site made copy of existing and started self flow, we need to reduce double framework to one with all functionality (done)
- We have tons of phone numbers that should be tested (how long it takes to pull phone up), requested service to provide full roundabout between lsited numbers, with statistics and everything related to success failure measurement.
- Tons of styling problems on landing pages
- Tons of problems like implement new backend api, create newly structured landing page.
- Colleague guidance (help in task implementations) usually, I can't understand what's going on, do this and then that, ok we are done.
- Some urgent fixes, (Hello Maris we can't understand why our site .. is not responding can you fix it?), lets see okay done.
- once One Business owner // TL, came told that his DB is catching deadlocks can you help. I spent 2 hours to fix it. He asked where was problem, I answered create better table structure and details what exactly and why.
- Our JQGrid is not optimal it takes tons of time to filter using any criteria, please optimize this. (I made something strange not documented, but working about 1000 times faster than before, by removing JOIN table at all during filters, manual fix of MyISAM engine problem.)

Jun 2012 – Dec 2013

(18 months)

Software Developer (Social network games)

Sia Pingnetgames ❤

Technical Skills: Java 8 or lower, PHP 6, NodeJS, MySQL, SmartFoxServer, imagic, html5, MongoDB, svn

Project: In total we created and launched 3 games to Production

Team Size: 1 Flash Dev, 1 PhotoshopMaster, 1 Project Manager, Me

Tasks Thematic: social networks vk.com, odnoklansiki.ru, draugiem.lv, nk.pl, (facebook no prod apps)

Work on:

- started with complex game designing Piratello (database + server logic + admin page for editing images with imagic) launched in vk.com
- Guess the Word > admin page for editing everything, game and html5 for rendering game logic. social networks launched vk.com, draugiem.lv, nk.pl
- Payment system integration validating testing.
- Lines of life, launched odnoklasniki.ru (got in to top 20), vk.com. made admin page for editing levels, full server side with optimizations, database, configured VM(or something similar.), set up everything on VM
- Refactored Lines of life from Java + SFS to Node.js (easier to scale) strange decision for me but boss is the boss.
- Some random with free songs (asked to do some tasks there, like implement proxy for listening from social network lists, search there music and so on.)
- Creating roadmaps and coordinating team.

Feb 2010 – Jun 2012 Software Developer

Freelancer

(28 months)

Technical Skills: Java, Android SDK, PHP, Zend Framework, Google Maps, Sonar Cube, JavaScript, SQL (Oracle, MySQL)

Project: Football app, click-taxi, strange custom framework like zend, ...

Team Size: Different, but mainly solo

Tasks Thematic: Do what requested

Work on

- The Sun had app for Iphones they needed some one to make same for Android, I made it in 6 weeks.
- Click Taxi asked to implement some feature related to taxi (tracking, tracing and communications between them)
- Some strange guys asked to rework they're custom framework
- There was even more strange projects, that is not worth mentioning

Education

xxx – 2004: School boy.
2004 – 2008: RTK (Rīgas tehniskā koledža), Programming

Licenses and certifications

AZ900
Driving License B
GO Lang cert
Tons of Agile certs
Tons of kind a trash certs (linkeding trainings level.)

Languages

Latvian: Native
Russian: Native
English: B2 (have certificate :)

Skills

I learn very fast, due to large skill set and stack I'm struggling in GPT type responses like Hay say this say that. what is this and what is that.
